

June 15, 1987

TO: File

FROM: Frank J. Filas, Reclamation Engineer 

RE: Energy Fuels' Utah Operations, M/015/026, M/017/018, M/037/015, M/037/004, M/037/038, and M/037/021

On May 18 and 19, 1987, I inspected the above referenced mines with Bill Almas of Energy Fuels Nuclear. Mr. Almas said that the following mines would most likely be reclaimed, probably in the following order:

M/037/004	Betty Mine
M/017/018	Straight Creek Mine
M/037/015	Hillside Complex

Energy Fuels plans to reopen the following mines and would prefer not to reclaim them in the near future:

M/037/038	Repete Mine
M/015/026	Sahara Mine
M/037/021	Wood's Lease Mine

Some interim reclamation work will be needed at the Repete and Sahara Mines if they are to remain in an inactive state. Energy Fuels has a limited budget for reclamation in Utah, and I told Mr. Almas that we would prefer that they concentrate on complete reclamation of the first three mines before performing interim reclamation at the Repete or Sahara.
